

An aerial photograph showing a large wildfire burning in a forested area. The fire is concentrated on the right side of the image, with bright orange and yellow flames and thick, dark smoke rising. To the left of the fire, there is a dense forest of green trees. Overlaid on the image are several curved contour lines in green, yellow, orange, and red, likely representing temperature or fire intensity gradients. The lines curve from the top left towards the bottom right, following the edge of the burning area.
